

Adani Enterprise Ltd. considers energy as an important parameter of business performance and recognizes the global action needed for sustainable energy consumption and resource conservation to reduce the overall environmental footprint to mitigate the adverse impact of climate change.

As an energy-intensive company, AEL is committed to continuously improving the energy efficiency of its operational processes. This policy provides the guidelines to continuously optimize energy use to improve our sustainability performance.

The businesses under AEL shall endeavour to:

- Comply with all applicable energy management related regulations.
- Set objectives, targets and processes to conserve energy by implementing energy conservation projects and adopting energy efficient technologies.
- Promote usage of renewable, green and clean energy sources.
- Encourage green procurement and innovations to adopt sustainable and energy efficient technologies.
- Drive awareness campaigns for internal and external stakeholders to disseminate information about the importance of energy management and improving energy efficiency.
- Measure, monitor and review the energy performance in accordance with this policy at regular intervals.
- Assist suppliers and business partners in their energy management journey.

The content and robustness of implementation of this policy will be reviewed periodically and revised accordingly.
